## Reasons For Allowance

None of the references disclose alone or in combination an optical switching / routing system comprising first & second optoelectronic assembly, router assembly, redirecting sub-system optically interposed between router and second assembly wherein the second group of optical beams is received at the router assembly and each beam from the second group of optical beams is routed to a pre-selected location. From the pre-selected locations to which they have been routed, the second group of optical beams is redirected to the second opto-electronic assembly.
